EDUCATION

University of Florida: Bachelor of Science

Gainesville, FL

Major in Computer Science, Minors in Economics & Business Administration

MAY 2025

GPA: 3.79, Honors College

Awards and Achievements: HSF Scholar of the Year Semi-Finalist (2025), HSF Scholar (2021 - 2025), HSF STEM Summit Mentor (2024-2025), HSF STEM Summit Scholar (Sep 2023), High School Valedictorian (May 2021)

SKILLS

Technical Skills: C++, Python, C# , Java, JavaScript, TypeScript, Unity, Frostbite, SQL, React, AWS S3, Firebase

Project Management Tools: Git, Perforce, Agile, Scrum, Jira, Jaas, GitLab, CI / CD Pipeline Integrations, Vercel, Supabase

Languages: English, Spanish

EXPERIENCE

Electronic Arts

Orlando, FL

Software Engineer | AFL Tools

MAY 2025 - PRESENT

- Redesigned a React-based content change management tool to support searching and navigating **up to 1,000,000 changes** (a **200x increase** from the prior limit), utilizing selective rendering, lazy loading, and improved state management.
- Migrated data connectivity from a legacy SQL database to direct server RPC commands using **C++**, **Angular**, and **.NET**, giving external teams access to **real-time** game server data.
- Implemented a comprehensive unit testing framework to ensure stability, and helped debug tool issues through **docker** container management of our back-end deployments and **Splunk** and **Grafana** log indexing.
- Led an AI skill development initiative that reduced token usage for repetitive coding tasks and improved LLM context management across two codebases.

CFB Modes

- Fixed **30+ bugs** in *CFB 26* and built the **C++** backend for the *CFB 27* 'Dynasty Blueprint' support staff feature, utilizing internal data frameworks and server RPC integrations.

EA Sports Academy

- Led group assignments to implement new in-game screens and RPC commands, and directed a capstone project building **two new internal testing tools** using **Electron** and **.NET** to minimize Dev and QA testing time.

Software Engineering Intern | Madden SHIELD Team

MAY 2024 - AUG 2024

- Built the 'Dungeon Keeper' web application (**React**, **Python Flask**, **C#**) to automate the developer kit leasing process, handling live data pulls and task scheduling via **Linux cron**.

Google

Seattle, WA

Software Engineering Intern | Google Cloud Storage - Encryption

AUG 2024 - NOV 2024

- Designed and implemented a scalable solution to upgrade the encryption algorithm from AES-128 to AES-256 for 8 billion data points within Google Cloud Storage, leveraging internal tools analogous to **VS Code**, **Git**, **C++**, **Apache Beam**, and **Kubernetes**.
- Authored and presented a detailed 10-page design document outlining project architecture, constraints, and implementation plans to cross-functional stakeholders & implemented the solution through **10+** pull requests reviewed by the team.

CodePath

San Francisco, CA (Remote)

Tech Fellow | Android App Development, Advanced Technical Interview Prep

JAN 2023 - AUG 2024

- Increased university outreach by **150%** for students and **75%** for tech fellows through marketing and training.
- Taught around 40 students in class sessions for 10 weeks for each course, and, encouraging the **UMPIRE** method, resulted in a **70%** improvement in problem-solving efficiency and technical interview preparation.

INVOLVEMENT

University of Florida: Undergraduate Research

Gainesville, FL

Research (PRIMME AI Model)

JAN 2023 - MAY 2025

- Contributing to the study of material grain microstructure growth using AI simulation techniques, proficiency in **PyTorch** and **TensorFlow**, and optimized code for statistical analysis and plot generation. Conducted **5 to 10** standardized benchmarks on the 3D model to validate its accuracy against real-world data.

Additional Involvements: Society of Hispanic Professional Engineers, Venezuelan Student Association, Hispanic Scholarship Fund, ColoStack UF - VP & Administration Chair (Aug 2023 - May 2024), Chapter Ambassador for ColorStack National (Aug 2024 - May 2025)
